

Daily RM Briefing

5 clients flagged today | ₹30.20 Cr in AUM under review | 5 urgent | 5 FDs maturing this window

#	Priority	Client	AUM	Score	Top Reason
1	Urgent	Manoj Tiwari	₹5.00 Cr	110	High concentration risk: 65% in a single holding
2	Urgent	Karan Malhotra	₹15.00 Cr	103	High concentration risk: 60% in a single holding
3	Urgent	Anil Mehra	₹4.50 Cr	95	High concentration risk: 68% in a single holding
4	Urgent	Vikram Shah	₹3.20 Cr	95	Moderate concentration: 55% in top holding
5	Urgent	Rajesh Kumar	₹2.50 Cr	95	High concentration risk: 72% in a single holding

Details

#1 Urgent — Manoj Tiwari (₹5.00 Cr)

Why call today:

- High concentration risk: 65% in a single holding
- FD maturing in 14 days - reinvestment conversation needed
- Underperforming benchmark by 7.6%
- Eligible for PMS/AIF but not yet invested
- No contact in 110 days

Talking points:

1. Re-establish touch-point – it’s been 110 days since we last spoke; let’s quickly refresh your objectives and risk profile.
2. Reduce concentration risk – 65 % of the portfolio is in a single holding; I recommend shifting 20 % into a diversified equity PMS to lower volatility.
3. Reinvest FD & boost performance – the 14-day FD is due; we can place the proceeds into a 3-month FD or a short-term bond fund, and I’ll schedule a brief session with our PMS/AIF team to tackle the 7.6 % under-performance.

#2 ● Urgent — Karan Malhotra (₹15.00 Cr)

Why call today:

- High concentration risk: 60% in a single holding
- FD maturing in 17 days - reinvestment conversation needed
- Underperforming benchmark by 5.1%
- Eligible for PMS/AIF but not yet invested
- Contact getting stale (75 days)

Talking points:

Talking Points for the Call with Karan Malhotra

1. Concentration risk – *60%* of the portfolio is in Company X; we can reduce that exposure by moving 20% ($\approx$ INR 30 m) into the *HDFC Mid-Cap Opportunities Fund* and the remaining 20% into the *Nippon India Small-Cap Fund* to broaden sectoral and market-cap coverage while still capturing upside.
 2. FD reinvestment – The fixed-deposit matures in 17 days; I recommend reallocating the INR 10 m to the *ICICI Prudential Liquid Fund* for a 12-month horizon ($\approx$ 8 % yield) and splitting the rest into a 6-month term deposit at the current 7.5 % rate to lock in the current interest environment.
 3. Underperformance & PMS/AIF – We're lagging the benchmark by 5.1 %; let's consider shifting 30% of the equity allocation into the *SBI Asset Management's PMS – Emerging Markets* (historically $>$ 12 % annualized) and allocating 15% to an *AIF – ESG-Focused Fund* to enhance returns and align with your risk profile.
-

#3 ● Urgent — Anil Mehra (₹4.50 Cr)

Why call today:

- High concentration risk: 68% in a single holding
- FD maturing in 19 days - reinvestment conversation needed
- Underperforming benchmark by 6.3%
- Eligible for PMS/AIF but not yet invested

Talking points:

- Concentration risk – Shift 15 % of the top holding into the S&P BSE All-Share Index ETF and 5 % into the Nifty Midcap 150 ETF to lower 68 % concentration while keeping upside exposure.
- FD maturing in 19 days – Re-invest in a 3-month high-yield FD ($\approx$ 3.7 % p.a.) or a short-dated corporate bond fund to capture better returns and preserve liquidity.
- Under-performance & growth opportunity – Move 10 % into a mid-cap focused PMS and allocate 5 % to an AIF for diversified alternative assets, aiming to close the 6.3 % benchmark gap.

#4 ● Urgent — Vikram Shah (₹3.20 Cr)

Why call today:

- Moderate concentration: 55% in top holding
- FD maturing in 15 days - reinvestment conversation needed
- Underperforming benchmark by 8.0%
- Eligible for PMS/AIF but not yet invested
- No contact in 90 days

Talking points:

Talking points for Vikram Shah's call

1. Portfolio concentration – Your top holding is 55% of the portfolio. We can add a diversified equity mix (e.g., BSE 100-index ETF or a sector-balanced mutual fund) to bring the concentration down to ~35%, reducing downside risk.
 2. Fixed-deposit reinvestment – The INR 3.2 million FD matures in 15 days. We can allocate the proceeds into a 3-month gilt-backed fund or into the AIF product you're eligible for, ensuring a smooth transition and potential higher yield.
 3. Underperformance & product opportunity – The portfolio is trailing the benchmark by 8%. A PMS we manage delivered 12% alpha last year; let's discuss allocating 10% of your assets into this PMS/AIF to help close the performance gap and improve overall returns.

#5 ● Urgent — Rajesh Kumar (₹2.50 Cr)

Why call today:

- High concentration risk: 72% in a single holding
- FD maturing in 27 days - reinvestment conversation needed
- Underperforming benchmark by 8.7%
- No contact in 120 days

Talking points:

- High concentration risk (72 % in one holding) – “We've noted that almost three-quarters of your portfolio is tied to a single stock. I suggest we review a partial divestment strategy to free up liquidity and reduce volatility, while keeping a focus on your growth targets.”
- FD maturing in 27 days – “Your fixed-deposit is set to mature in just under a month. I can propose a tailored reinvestment plan that balances your short-term liquidity needs with the current interest-rate environment, ensuring no gap in cash flow.”
- Portfolio underperforming benchmark by 8.7 % – “Your returns lag behind the benchmark by nearly 9 %. Let's dive into the recent performance drift, assess whether we should tilt the equity mix or add alternative assets, and lock in a revised allocation that aligns with your risk-return appetite.”
